Optimizing solutions, advancing human progress.

## Positive Displacement Pumps

### Reciprocating Pumps

#### High-Pressure Efficiency

Positive Displacement Pumps provide continuous flow regardless of system pressure, ensuring high-pressure efficiency. They work by trapping a fixed volume of fluid and moving it through the system, making them ideal for applications requiring consistent and reliable fluid transfer.

#### Applications

Positive Displacement Pumps are commonly used in mud pumping, well servicing, chemical processing, cement pumping, frac pumping, pump-down operations, pipeline pigging, and pressure testing.

#### Common Brands

- Kerr
- NOV
- Wheatley
- Gaso
- Gardner Denver
- GD Energy Products
- Serva
- SPM
- Weir
- Hydraplex
- OFM
- Ellis Williams
